24/7 access to machine data and reports

Machine monitoring in real time

The SmartInterface is a server based application enabling the monitoring of tablet press production parameters and HMI settings via mobile devices (Laptop, Tablet, Smartphone etc.). The user can obtain an overview of the current production and machine status at any time and independent of location, and download data and protocols, for example.

This helps everyone involved in production to maintain full control of the manufacturing process. Operators can react faster to deviations as they are informed of the current status at all times. The application is available on all standard web browsers via the company's network. Accordingly, only the user's own IT security guidelines apply.

Key benefits

- + Retrieve data at any time and from anywhere, even in editable formats such as Excel, without blocking the machine or impacting production
- + Process acceleration through easy and fast access to production parameters and HMI settings
- + Data update <1s (dependent on the customer network and capacity utilization)
- + Less ways to the machine and personal protective equipment required
- + Access subject to the customer's IT security guidelines
- + Access rights also based on HMI access rights
- + No validation-relevant change in case of a later upgrade

Process graphic

The process graphic offers in-house monitoring of production parameters in real time.

Monitoring all process data

The monitoring functions can be used to record and export all process values and utilize them for analyses.

KPI dashboard

The KPI dashboard provides an overview of the current production and machine status.

Technical requirements

- + Compatible machine types with HMI software level Visual 7 or higher (FE Series, new i Series, new p Series)
- + FE Series: Using or upgrading to an APC910 unit enables full functionality and performance
- + FE Series: When using an APC810 unit test operation is possible
- + The machine must be integrated in an IT network (TCP/IP)
- + The mobile device must be within the machine network or communication (e.g. via network routes) must be possible
- + The appropriate firewall rules must be entered connection specific
