Together to the Next: Fette Compacting at interpack 2023

Schwarzenbek/Düsseldorf, May 4, 2023 – Customer orientation and collaboration are the key topics for Fette Compacting at interpack 2023. Under the motto "Together to the Next" the leading supplier of tableting solutions invites trade visitors to join open discussions about innovative ideas and complex projects in the area of OSD production.

"Manufacturers of pharmaceuticals and nutrition supplements face a wide variety of challenges. We think it is important to involve our customers very closely and as early as possible in our development processes. The better we understand what our customers need, the more precisely we can offer solutions that fit," is how CEO Joachim Dittrich explains the basic ideas behind his company's presence at the trade show. *"That is why we are not only presenting our production solutions at interpack 2023, but also inviting visitors to participate in lively discussions with our experts about current and future issues which are of relevance to them. For this purpose, we have created a dedicated area on the first floor of our booth, which we call 'Collaboverse.' This is how we describe our close 'collaboration' with customers and partners, combined with the 'universe' representing unlimited space."*

From the user's point of view, Fette Compacting sees shorter development cycles and the corresponding need for solutions to bring new products to market more quickly as topics for the future. Process optimization and efficiency increases in ongoing production also remain important. From a technical perspective, the significance of new, real-time data-driven digital solutions is increasing, as is Continuous Manufacturing, which is already successful in individual areas of the pharmaceutical industry and is now on the verge of a breakthrough in series production.

Sustainable in every way

"The topic of sustainability along the entire value chain forms an overarching framework," Dittrich is certain. *"As a machine manufacturer, our role in this area is twofold: on the one hand, we support our customers in implementing their sustainability strategies. On the other hand, we also take measures ourselves to comply with our social responsibility. We take a close look at the carbon footprint of our entire company in order to make our own manufacturing process and our products more sustainable."*

At interpack 2023, Fette Compacting is primarily focusing on the energy and resource efficiency of its customer solutions. With the FE CPS, the company is presenting its latest development to the international public for the first time at a trade show. A highly-compact solution for continuous direct compression that sets new standards in efficiency and simplicity, thereby enabling optimal utilization of materials. A mixed reality application makes it possible for visitors to experience how the new system can be optimally integrated in existing production areas.

The latest generation of the i Series including matching process equipment will also be on show. Apart from numerous innovative solutions, all models of the new machine series use intelligent energy monitoring, which enables savings of up to 15 percent for users.

Efficiency across the entire life cycle

Fette Compacting is addressing the increasing importance of service offers for efficient production at interpack 2023 by presenting its portfolio of innovative, digital solutions, among other things. So-called Oral Solid Dosage intelligent (OSDi) solutions comprise digital solutions for both production and training.

Fette Compacting will also be showing its comprehensive solutions for tool and spare parts management at a separate booth. These include, in

particular, the modular EasyCare handling and care system for tableting tools.

"At interpack 2023, we want to position ourselves as our customers' system partner for comprehensive and future-proof solutions for OSD production," Joachim Dittrich emphasizes, and adds*: "We are ready for a new dimension of collaboration and look forward to many inspiring discussions."*
