

## **Learning app alva offers expert knowledge for tablet production**

**Schwarzenbek, August 22, 2022 – A training tool that is always available: This is alva, the new learning app from Fette Compacting's OSDi business unit. As a browser-based application, alva can also be consulted on mobile devices anytime and anywhere to impart in-depth knowledge about tablet production.**

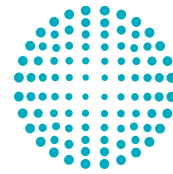

Digital tools can sustainably improve pharmaceutical and nutrition production. How this can be achieved is a core topic at Fette Compacting. Based on the needs of pharmaceutical and food producers, the OSDi business unit develops practical software solutions for tablet production. Its focus is on increasing the efficiency of the entire manufacturing process by supporting operators, maintenance technicians and production managers, as well as using data intelligently.

The new app alva helps to train operators as well as maintenance technicians and qualify them for work on the tablet presses quickly and easily. This is ensured by the comprehensive content, which is based on the knowledge of experienced trainers and design engineers. Users thus receive up-to-date and precise first-hand knowledge.

"Our learning software takes a new approach, as conventional apps are often not technically detailed enough, but at the same time overloaded with numerous unnecessary functions," emphasizes Britta von Selchow, Head of OSDi Digital Solutions at Fette Compacting. "With alva, users can now focus entirely on the essentials."

### **Interactive and animated learning content**

Learning with alva is supported by interactive, three-dimensional graphics, animations and instructions. The app is divided into different modules, each of which presents a work process such as preparing a tablet press for production or an important assembly. Each module explains how the individual components work together, what their central functions are, and which process steps should follow one another. After completing a learning unit, users can test their knowledge to document their understanding of the content. The freshly learned knowledge can then be tested directly on the machine. In case of uncertainty, alva can accompany the work on mobile devices. This way, new employees can always be sure they are doing the right thing on the machine.

**About Fette Compacting**

Fette Compacting is the world's leading provider of integrated solutions for industrial tablet production. The company has its headquarters in Schwarzenbek near Hamburg. A second technology and production facility is operated in Nanjing, China. Fette Compacting is represented in more than 50 countries worldwide. It is a member of the LMT Group, a medium-sized, family-owned group of companies. 1,800 people work for LMT Group companies at over 20 locations worldwide. The Group achieved sales of 375 million euros in fiscal 2021.
