be efficient

ARUNA SDC1200

The all-rounder

The medium-sized cleaning system with ideal footprint. Enables fully automated cleaning, preservation and drying of larger quantities of punches, dies and segments as well as of other machine parts and the equipment of our tablet presses.

ARUNA SDC1200 features

- + Compact footprint
- + Low water consumption (from 50 liters per water change)
- + Highly efficient heating of air and water
- + Shortest drying times
- + Uncompromising hygiene design
- + Self-cleaning pipe system
- + Flow-optimized design for minimum current consumption
- + Highly precise and flexible dosing system
- + Intuitively operated HMI panel
- + High level of recipe options
- + Loading of products to be washed up to 500 kg
- + Utility room can be selected on the left or right side
- + Optional two door as pass-through system
- + Customer-specific documentation

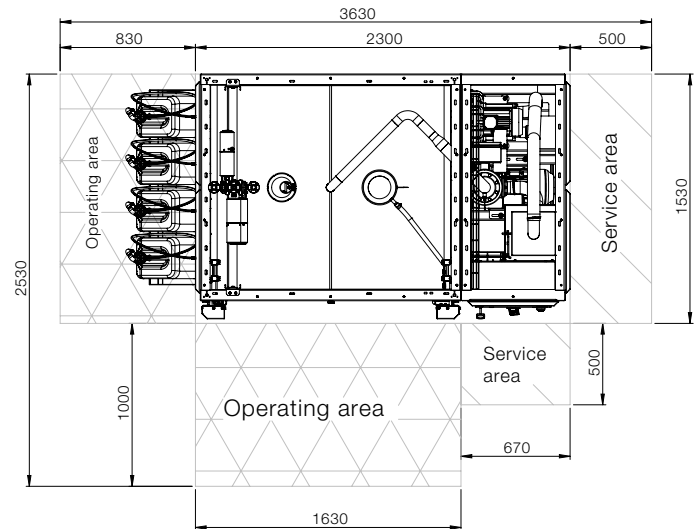

Technical data

MODEL SDC1200

Outer dimensions L x W x H	2530 x 1502 x 2400 mm
Cleaning chamber L x B x H	1200 x 1200 x 900 mm
Number of doors	1 or 2
Door opening	Vertical
Water consumption	50–80 l per water change
Water media connections	Up to 3 pieces, more possible on request
Detergent connections	Up to 4 pieces, more possible on request
Maximum washing pressure	3 bar
Maximum delivery rate	666 l/min
Heating	Steam or electric

FOOTPRINT

Wash racks

The wash racks are the central element for an optimum reproducible cleaning result.

A validated cleaning process results from the combination of a well-organized wash rack and a reliable cleaning system. All wash racks are subject to a spray shadow verification (Riboflavin verification) in order to verify a holistic wetting of the wash items.

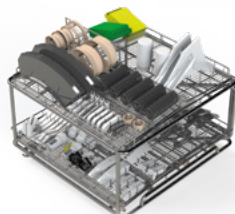

For GMP-compliant, non-residuous and validated cleaning and preservation, we recommend cleaning agents and corrosion protectants from Borer Chemie AG.
